Specialist Clinic Management

Paperless Efficiency for
Healthcare Management

“As soon as blood test results are registered on the laboratory machines, both pathology and the consultant can see them immediately”.

**Dr Barakat, Medical Director
(Imperial College London Diabetes Centre, Abu Dhabi)**

Hicom Technology

Hicom Technology Ltd is one of the leading and most experienced software development companies operating in the healthcare sector.

Hicom supply and implement specialist healthcare management products and tailor-made healthcare solutions for use within a clinical setting.

At Hicom we pride ourselves on the technical excellence of our products, their ease of use and the quality of the service we offer our customers.

Hicom has supplied specialist clinical management software for over 20 years, with more than 250 healthcare clients worldwide.

From small private practices to National implementations, Hicom's flexible and scalable systems have been used to manage patient care across the healthcare spectrum.

Hicom **Enterprise** provides for real-time, end-to-end management of the clinical and administrative process, delivering integrated care in a paperless environment.

“The ability to review all the information relevant to each patient at the point of care allows me to make better informed decisions on medication and care planning”.

**Roy Harper, Consultant Diabetologist
(Ulster Community Hospital Trust, Belfast)**

Total Clinical Management Solutions

Enterprise from Hicom, is a modular and fully integrated patient and clinic management system that offers a complete solution across the entire care management process; from patient booking and care planning to invoicing, payment and follow-up.

Enterprise has been designed to capture information in a paperless environment and uses Smartcard technologies to provide secure and effective workflow management facilities for the entire multi-disciplinary team.

Enterprise manages patient booking and appointments, resource scheduling, patient care programmes, clinical investigations, treatment plans, laboratory tests, drug administration, pharmacy management, patient billing and insurance claim administration.

Enterprise integrates seamlessly with the clinical and administrative processes of the healthcare management environment, diagnostic and monitoring equipment and back office financial management software.

Enterprise interfaces directly with medical devices for patient testing and monitoring, enabling diagnostic data to be captured in real-time without paper records.

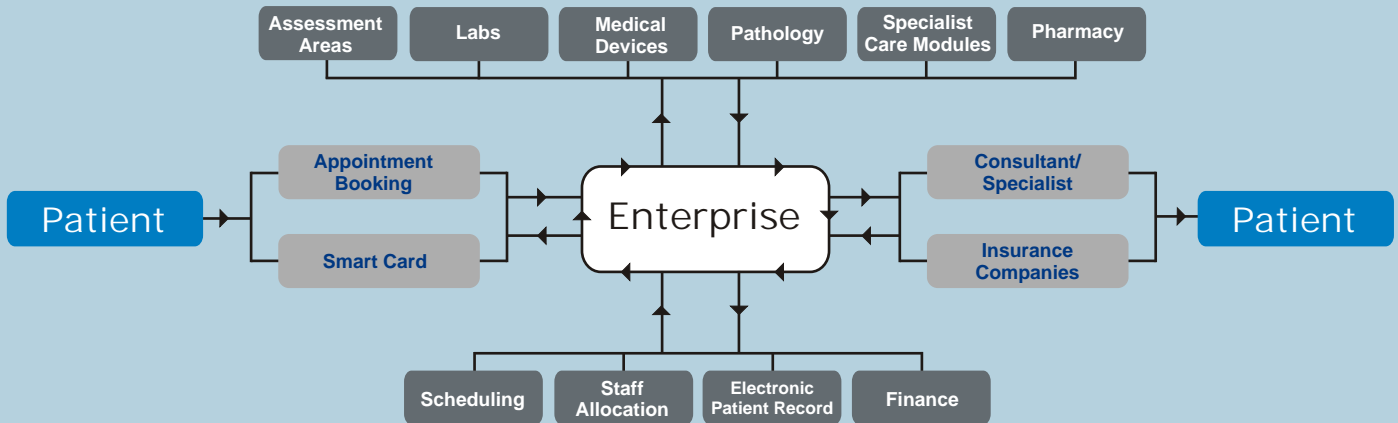

Enterprise provides comprehensive pathology management facilities, including direct and real-time integration with pathology machines, or it can be integrated with existing lab management systems.

Enterprise incorporates a powerful pharmacy management module providing electronic prescribing facilities and instant alerts on the availability of drugs and consumables with active stock management.

Based on a wealth of detailed clinical information recorded at the point of patient care, **Enterprise** enables clinicians to prescribe the most appropriate mode of treatment and drug therapy for patients.

Enterprise: Specialist Clinic Management

The Enterprise Solution
